Power and productivity
for a better world™

Motor rated operational powers and currents

The currents given below concern standard three-phase four-pole cage motors (1500 r.p.m. at 50 Hz 1800 r.p.m. at 60 Hz). These values are given for guidance and may vary according to the motor manufacturer and depending on the number of poles.

| IEC Motor power kW | Motor nominal current: standardized values in blue colour (according to IEC 60947-4-1 Annex G) | | | | | | | | | |

ABB sets a new standard in motor control and power switching

1

Featuring AF technology as standard, the latest range of ABB's contactors establishes a new industry benchmark. The electronically controlled coil offers multiple benefits over conventional alternatives, and together with ABB's wide product offering – an optimal configuration, every time.

Access Global Support

The contactor and motor protection range from ABB is compatible with all major national and international standards and is available worldwide via a global distribution network. One contactor coil now handles 100 V – 250 V, AC/DC for use in Europe or Asia as well as North America.

Optimize logistics

With its contactor and motor protection range, ABB has managed to reduce the number of contactor coils to just four. The total number of product variants has been reduced by up to 90%. This simplifies the customers' logistics and cuts administration costs.

Simplify design

By reducing contactor coil energy consumption by up to 80%, panels can be built smaller and transformers more compact. All the features of the AF technology, along with access to drawings and coordination tables online, simplifies your design and assembly process.

Secure uptime

Time to prevent stoppages caused by voltage fluctuations. The AF contactor ensures distinct operation in unstable networks and signifies a major advance in motor control and power switching. Voltage sags, dips and surges pose no threat. The AF contactor secures your uptime.

MacGregor. Keeping turnarounds brief.

Until the AF range was installed, voltage sags were affecting MacGregor's deck cranes. Conventional contactors welded shut, leading to several stoppages a week. No longer. Known for superior quality and an ability to operate in the most hostile environments, MacGregor deck cranes enjoy a global reputation for reliability. A small but vital component, the AF contactor helps maintain this reputation.

To keep things moving, you need Control. Connect to Control.

Contactors and motor protection

For a wide variety of segments

1

HVAC, General Machinery, Rail, Critical Power, Wind, Solar, Marine and Water & Wastewater

Contactors for any use

The AF contactor range covers small motor starting solutions from 4 kW / 5 hp up to big power switching solutions with our unique AF2650, the biggest single case block contactor in the world.

The contactor and motor protection range is part of one of the widest product offerings on the market meaning that ABB not only can provide the contactor but the full solution.

In addition to the standard product range ABB also offer products for special needs such as Bar contactors, GAF and contactors for capacitor switching.

Cooperating with customers

ABB cooperates closely with its customers to ensure that products meet requirements from their specific segments and applications. With over 100 years' experience in motor control and power switching ABB knows how to create efficient solutions for its customers.

AF technology

Benefits

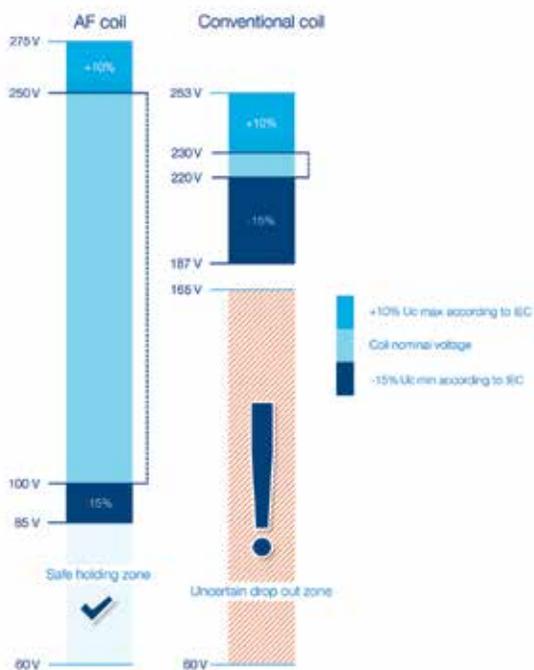

Reliable in all networks

The electronic system within the AF contactor rectifies the AC or DC control circuit voltage to a DC control voltage that is applied on the coil. The contactor is safely operated in an always optimized condition making it virtually noise free.

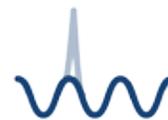

Four coils for the entire voltage range

The AF contactor features both AC and DC support. With the complete AF contactor range, functionality is improved. Still, the total number of product variants compared to a conventional range is reduced by 90%. Only four coils are required to cover 24 V AC, 20 V DC - 500 V AC/DC.

Wide control voltage range

With conventional contactor technology, different contactors were needed for different network voltages. Thanks to the wide operating range of the AF contactor it can operate just as well in Europe as in Asia or North America. The core coil of the AF contactor range covers 100-250 V AC/DC 50/60 Hz.

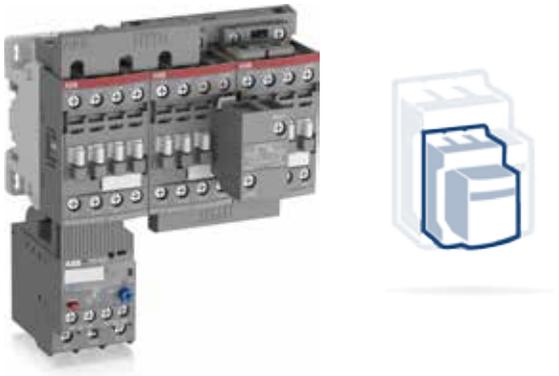

Built-in surge suppression

With conventional contactor technology it is recommended to use an external surge suppressor, an accessory that could cost as much as half the contactor itself. With the AF technology the surges are handled by the contactor itself and the surge never reaches the control circuit. Neither the surge suppressor nor the actual surge has to be considered anymore. One less product and one less complication to worry about.

Contactors and motor protection

Advanced but simple

1

The AF contactor is compact

The AF contactor is compact in size and has had its width reduced by up to 30% thanks to an 80% reduction of the coil's energy consumption.

The AF contactor is flexible

AF09...AF370 is perfect for motor starting applications and for solutions where space is limited. Interlocked reversing pairs require no spacing between contactors meaning you can fit more functionality into cabinets or other small enclosures.

Coil terminal access in the front

The AF contactor has its coil terminals accessible from the front. The cables or bars do not have to be disconnected in order to perform voltage measurement or servicing work.

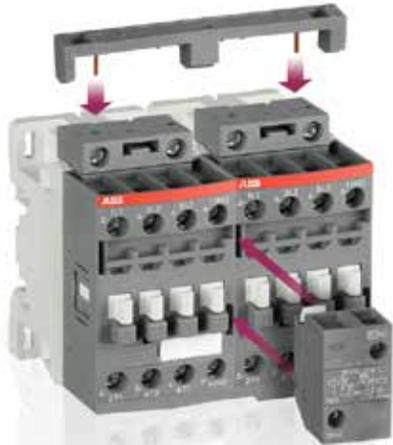

More functionality without adding width

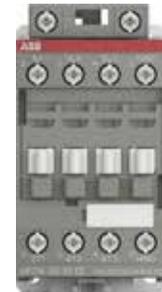

The AF116 ... AF2650 can take up to 2 side mounted auxiliary contact blocks without adding to its width and are delivered with 1 N.O. + 1 N.C. as standard.

Contactors and motor protection

Mechanical features

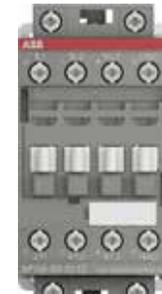

Front-mounted

Top-mounted

Bottom-mounted

Additional LDC4 coil terminal block

Easy-to-use accessories

Contactors up to 96 A offer free choice of coil terminal access and can take side and front mounted auxiliary contact blocks. All the accessories: Coil connection terminals, mechanical and electrical interlocks and electronic timers are easily connected through the snap-to-connect function.

Safe control circuit with:

- Mirror contact according to IEC 60947-4-1
- Mechanically linked contacts according to IEC 60947-5-1
- Sealable and transparent protective covers on AF09...AF96 and overload relays TF/EF
- Third party certification:
 - AF09...AF96, NF
 - AF400...AF2050

Connect to Control

ABB is introducing its complete AF contactor range. The AF technology is well appreciated by customers and establishes a new industry benchmark. ABB sets a new standard in motor control and power switching. Watch the video above or read how our customers experience the AF technology.

Case studies

Instead of telling our customers about the AF contactor – we asked them. They are the ones using the products everyday and therefore they should have the most interesting stories.

AF09 ... AF38 3-pole contactors

5 to 20 hp at 480 V AC

AC / DC operated

2

AF09-30-10

AF26-30-00

Description

AF09 ... AF38 contactors are mainly used for controlling 3-phase motors and power circuits up to 690 V AC and 220 V DC. These contactors are of the block type design with 3 main poles.

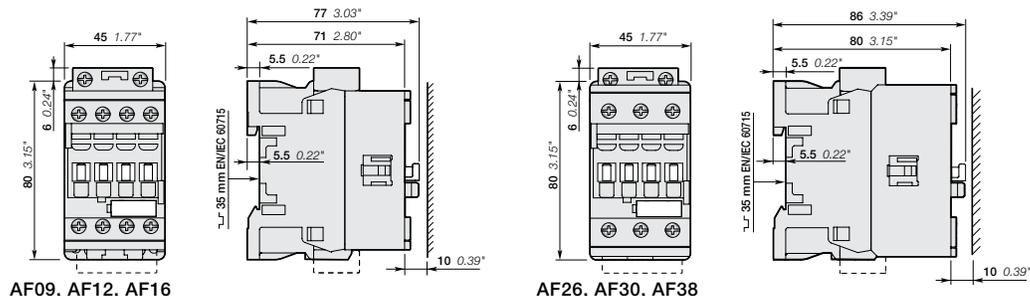

- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...500V 50/60 Hz and 20...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening.
- built-in surge suppression
- add-on auxiliary contact blocks for front or side mounting and a wide range of accessories.

(1) For 24...60 V 50/60 Hz - 20...60 V DC, use AF..-30-..-11 (see voltage code table). AF..-30-..-11 not suitable for direct control by PLC-output.

Main dimensions mm, inches

AF09Z ... AF38Z 3-pole contactors

5 to 20 hp at 480 V AC

AC / DC operated - low consumption

AF09Z-30-10

AF26Z-30-00

Description

AF09Z ... AF38Z contactors are mainly used for controlling 3-phase motors and power circuits up to 690 V AC and 220 V DC. These contactors are of the block type design with 3 main poles.

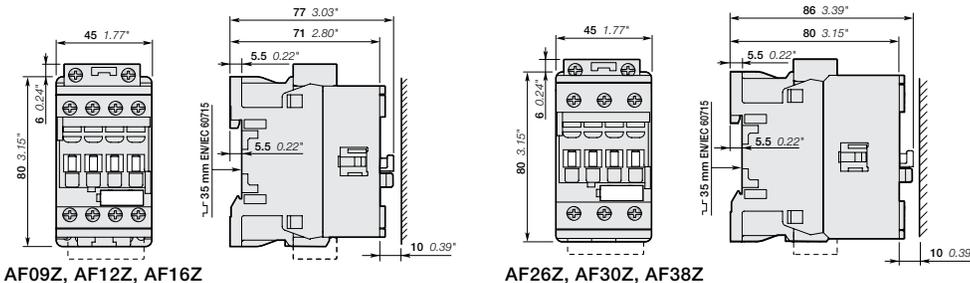

- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...250 V 50/60 Hz and 12...250 V DC
- can manage large control voltage variations
- allow direct control by PLC-output ≥ 24 V DC 500 mA
- reduced panel energy consumption
- very distinct closing and opening
- can withstand short voltage dips and voltage sags (SEMI F47-0706 conditions of use on request).
- built-in surge suppression
- add-on auxiliary contact blocks for front or side mounting and a wide range of accessories.

30 to 60 hp at 480 V AC

AC / DC operated with 1 N.O. + 1 N.C. auxiliary contacts

2

AF40-30-11

AF80-30-11

Description

AF40 ... AF96 contactors are mainly used for controlling 3-phase motors and power circuits up to 690 V AC and 220 V DC. These contactors are of the block type design with 3 main poles.

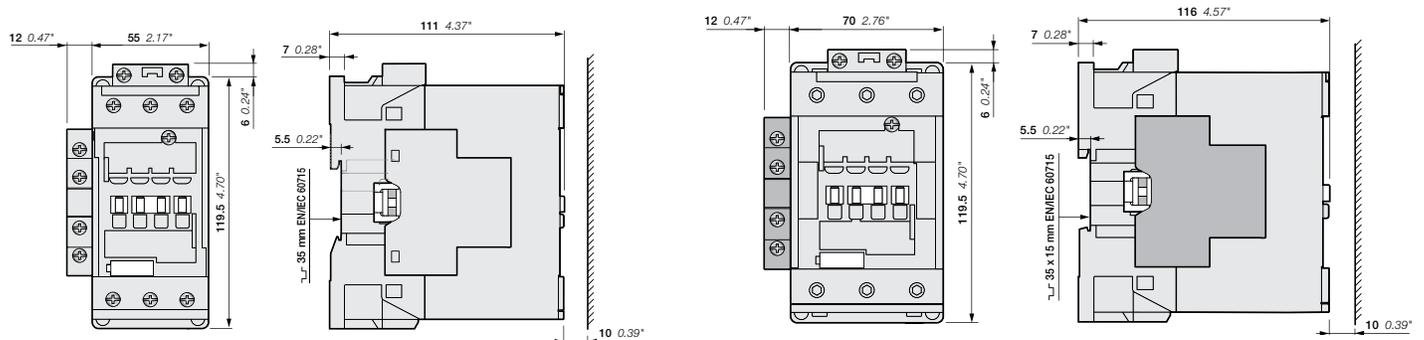

- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...500 V 50/60 Hz and 20...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening.
- built-in surge suppression
- add-on auxiliary contact blocks for front or side mounting and a wide range of accessories.

AC / DC operated with 1 N.O. + 1 N.C. auxiliary contacts

AF146-30-11

AF146-30-11B

Description

AF116 ... AF140 contactors are mainly used for controlling 3-phase motors and power circuits up to 690 V AC, AF146 up to 1000 V AC. These contactors are of the block type design with 3 main poles.

- Control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...500 V 50/60 Hz and 20...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening
- can withstand short voltage dips and voltage sags (SEMI F47 conditions of use on request).
- built-in surge suppression
- add-on auxiliary contact blocks for side mounting and a wide range of accessories.

AF400 ... AF750 3-pole contactors

350 to 600 hp at 480 V AC

AC / DC operated with 1 N.O. + 1 N.C. auxiliary contacts

AF460-30-11

AF750-30-11

Description

AF400 ... AF750 contactors are mainly used for controlling 3-phase motors and power circuits up to 1000 V AC or 600 V DC (2). These contactors are of the block type design with 3 main poles.

- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 coils to cover control voltages between 48...500 V 50/60 Hz and 24...500 V DC
 - can manage large control voltage variations
 - reduced panel energy consumption
 - very distinct closing and opening
 - can withstand short voltage dips and voltages sags (SEMI F47 conditions of use on request).
- built-in surge suppression
- add-on auxiliary contact blocks for side mounting and a wide range of accessories.

AF1250-30-11

AF2650-30-11

Description

AF1250 ... AF2050 contactors are mainly used for controlling power circuits up to 1000 V AC or 850 V DC, AF2650 for controlling power up to 1000 V AC. These contactors are of the block type design with 3 main poles.

– control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC)

– only 4 coils for AF1250 to cover control voltages between 48...500 V 50/60 Hz and 24...500 V DC
 – only 1 coil for AF1350 ... AF2650 to cover control voltages between 100...250 V 50/60 Hz and 100...250 V DC

- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening
- can withstand short voltage dips and voltages sags (SEMI F47 conditions of use on request).

– built-in surge suppression

– add-on auxiliary contact blocks for side mounting and a wide range of accessories.

AF09ZR-30-22

Power bus diagram

Description

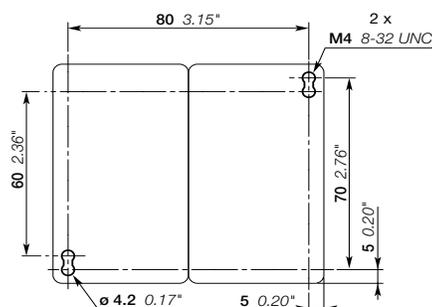

- AF09ZR ... AF30ZR reversing contactors are mainly used for directionally controlling 3-phase motor circuits up to 690V AC. These devices include two 3-pole contactors, a mechanical and electrical interlock, power bus (see diagram to the left), and are assembled using fixing clips.
- **Note: for mechanically and electrically interlocked devices without power bus, replace the R in the catalog number with an M (ie. AF09ZR-30-22-23 becomes AF09ZM-30-22-23).**
- Control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage
- Range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...250 V 50/60 Hz and 20...250 V DC
 - can manage large control voltage variations
 - allow direct control by PLC-output ≥ 24 V DC 500 mA
 - reduced panel energy consumption
 - very distinct closing and opening
 - can withstand short voltage dips and voltage sags (SEMI F47-0706 conditions of use on request).
- Built-in surge suppression
- Add-on auxiliary contact blocks for front or side mounting and a wide range of accessories.

AF140R-30-22

Power bus diagram

Description

AF116R and AF140R reversing contactors are mainly used for directionally controlling 3-phase motor circuits up to 690V AC. These devices include two 3-pole contactors, a mechanical interlock, side-mounted auxiliary contacts for electrical interlocking, power bus (see diagram to the left), and are mounted on a backplate.

Note: for mechanically and electrically interlocked devices without power bus, replace the R in the catalog number with an M (ie. AF116R-30-22-13 becomes AF116M-30-22-13).

- Control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...500V 50/60 Hz and 20...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening
- can withstand short voltage dips and voltage sags (SEMI F47-0706 conditions of use on request).
- Built-in surge suppression
- Add-on auxiliary contact blocks for side mounting and a wide range of accessories.

AF140N4-30-11B

AF265N5-30-11

Description

AF140N4 and AF265N5 NEMA rated contactors are mainly used for controlling 3-phase motor circuits up to 575V AC. These contactors are of the block type design with 3 main poles.

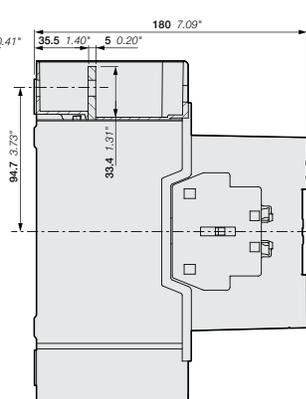

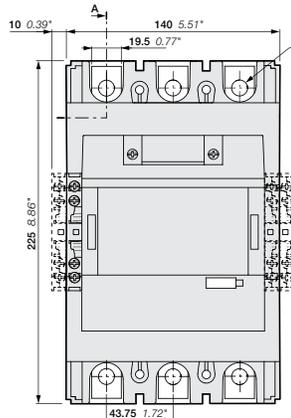

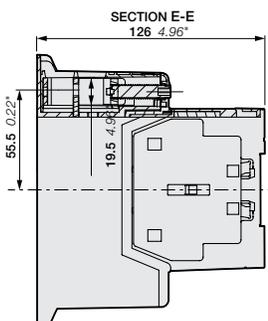

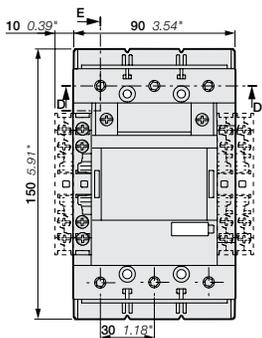

- Control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...500V 50/60 Hz and 20...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening
- can withstand short voltage dips and voltage sags (SEMI F47-0706 conditions of use on request).
- Built-in surge suppression
- Add-on auxiliary contact blocks for side mounting and a wide range of accessories.

Description

AF460N6 and AF750N7 NEMA rated contactors are mainly used for directionally controlling 3-phase motor circuits up to 575V AC. These devices include two 3-pole contactors, a mechanical interlock, side-mounted auxiliary contacts for electrical interlocking, power bus (see diagram to the left), and are mounted on a back-plate.

Note: for mechanically and electrically interlocked devices without power bus, replace the R in the catalog number with an M (ie. AF460N6R-11-70 becomes AF460N6M-11-70).

- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 coils to cover control voltages between 48...500 V 50/60 Hz and 24...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening
- can withstand short voltage dips and voltage sags (SEMI F47-0706 conditions of use on request)
- built-in surge suppression
- add-on auxiliary contact blocks for front or side mounting and a wide range of accessories

AF09 ... AF38 4-pole contactors

25 to 55 A general use

AC / DC operated

2

AF09-40-00

AF26-40-00

Description

AF09 ... AF38 4-pole contactors are mainly used for controlling non-inductive or slightly inductive loads (i.e. resistance furnaces...) and generally for controlling power circuits up to 690 V AC and 440 V DC. These contactors are of the block type design with 4 main poles.

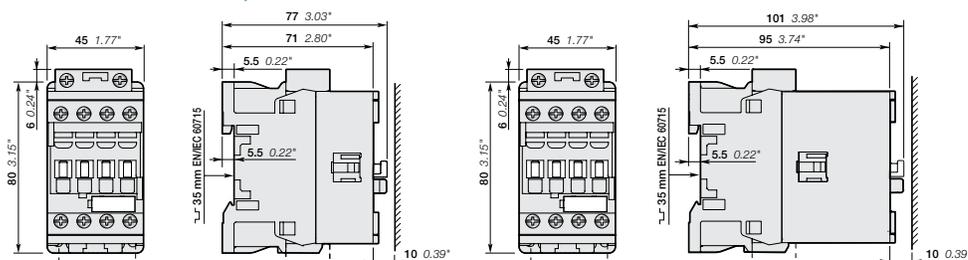

- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC), only 4 control voltage ranges covering 24...500 V 50/60 Hz and 20...500 V DC
- can manage large control voltage variations
- reduced panel energy consumption
- very distinct closing and opening
- built-in surge suppression
- add-on auxiliary contact blocks for front or side mounting and a wide range of accessories

NF44E

Description

NF control relays are used for switching auxiliary and control circuits.

These control relays are of the block type design with:

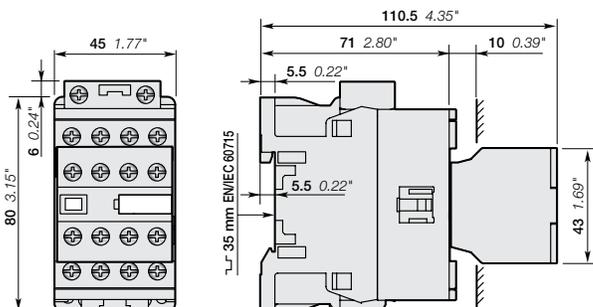

- 8 poles with a permanently fixed 4-pole auxiliary contact block. Control relays have mechanically linked auxiliary contact elements (side-marked symbol)
- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC)
 - can manage large control voltage variations
 - only 4 control voltage ranges covering 24...500 V 50/60 Hz and 20...500 V DC
 - reduced panel energy consumption
 - very distinct closing and opening
- built-in surge suppression
- add-on auxiliary contact blocks for side mounting and a wide range of accessories

NFZ 8-pole control relays

Pilot duty rated A600 / Q600

AC / DC operated – Low consumption

NFZ44E

Description

NFZ control relays are used for switching auxiliary and control circuits.

These control relays are of the block type design with:

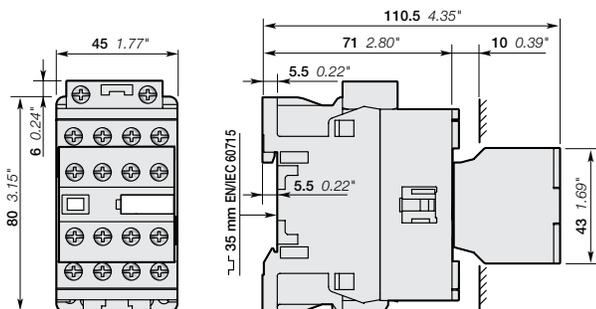

- 8 poles with a permanently fixed 4-pole auxiliary contact block. Control relays have mechanically linked auxiliary contact elements (side-marked symbol)
- control circuit: AC or DC operated with electronic coil interface accepting a wide control voltage range (e.g. 100...250 V AC and DC)
 - can manage large control voltage variations
 - only 4 control voltage ranges covering 24...250 V 50/60 Hz and 12...250 V DC
 - allow direct control by PLC-output ≥ 24 VDC 500 mA
 - reduced panel energy consumption
 - very distinct closing and opening
 - can withstand short voltage dips and voltage sags (SEMI F47-0706 conditions of use on request)
- built-in surge suppression
- add-on auxiliary contact blocks for side mounting and a wide range of accessories

Voltage code table

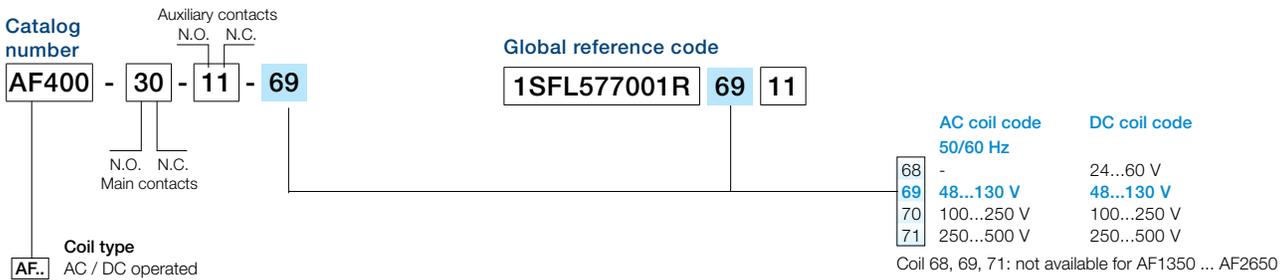

The below tables indicate the available coil voltages and corresponding digits for catalog numbers. When placing an order, please give the catalog number. Select a standard contactor from ordering detail pages. Change the coil voltage code in the catalog number according to the table below.

Example: for contactor AF400-30-11 and coil 100...250 V 50/60 Hz, the catalog number is AF400-30-11-70.

Auxiliary contact blocks for AF09 ... AF96 contactors and NF control relays

CA4-10

CAL4-11

CA4-22E

CAT4-11E

Description

The auxiliary contact blocks are used for the operation of auxiliary circuits and control circuits for standard industrial environments.

Types of auxiliary contact blocks for front mounting:

- CA4 1 or 4-pole block, with instantaneous N.O., N.C. contacts
- CC4 1-pole block, with N.O. leading contact or N.C. lagging contact
- CAT4 2-pole block, with instantaneous N.O. + N.C. contacts and A1 / A2 coil terminal connection on front face.

Select the 4-pole auxiliary contact blocks CA4-..E, CA4-..M, CA4-..U or CA4-..N type, according to the contactor or contactor relay type for compliance with the standard requirements (see "Terminal marking and positioning").

Types of auxiliary contact blocks for side mounting:

- CAL4 2-pole block, with instantaneous N.O. + N.C. contacts.

For clipping onto the right- and/or left-hand side of the contactors.

The auxiliary contact blocks are equipped with screw type connecting terminals delivered open, protected against accidental direct contact and bear the corresponding function marking.

(1) For each contactor or contactor relay type, refer to "Accessory fitting details" table.

Note: CAT4 not suitable for AF.Z contactors with DC control voltage 12...20 V DC.

Auxiliary contact blocks for AF116 ... AF2650 contactors

2

CAL19-11

Description

The auxiliary contact blocks are used for the operation of auxiliary circuits and control circuits for standard industrial environments.

Types of auxiliary contact blocks for side mounting:

- CAL 2-pole block, with instantaneous N.O. + N.C. contacts.

For clipping onto the right- and/or left-hand side of the contactors.

The CAL ...-11B is a second block for mounting in addition to a first CAL ...-11 block, right- and/or left-hand of the AF116 ... AF2650 contactors.

The auxiliary contact blocks are equipped with screw type connecting terminals delivered open, protected against accidental direct contact and bear the corresponding function marking.

CAL18-11

Auxiliary contact blocks for AF09 ... AF38 contactors and NF control relays for severe industrial environments

CE5-10W

Description

The auxiliary contact blocks are used for the operation of auxiliary circuits and control circuits for severe industrial environments.

Types of auxiliary contact blocks for front mounting:

- CE5 1-pole block, instantaneous with N.O. contact or N.C. contact, available in 2 IP degrees
- CE5 D with built-in microswitch IP40, degree of protection (IP20 on terminals)
- CE5 W with built-in microswitch IP67, degree of protection (IP20 on terminals).

The auxiliary contact blocks are equipped with screw type connecting terminals delivered open, protected against accidental direct contact and bear the corresponding function marking.

Ordering details (1)

Auxiliary contact blocks for AF400 ... AF2650 contactors for severe industrial environments

2

CEL18

Description

The auxiliary contact blocks are used for the operation of auxiliary and control circuits for severe industrial environments.

Types of auxiliary contact blocks for side mounting:

- CEL18 1-pole block, with built-in microswitch IP67 degree of protection (IP20 on terminals). Instantaneous N.O. or N.C. contact.

For clipping onto the right- and/or left-hand side of the contactors.

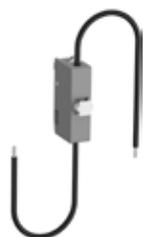

The auxiliary contact blocks are equipped with screw type connecting terminals delivered open, protected against accidental direct contact and bear the corresponding function marking.

Impulse contact blocks

CB5

Description

Impulse contact blocks are designed for use in enclosures, in association with an adjustable mechanical pushbutton. Two types are available:

CB5-10: N.O. contact with a black actuator ("ON" function)

CB5-01: N.C. contact with a light grey actuator ("OFF" function).

These blocks are equipped with 2 connecting leads 0.5 mm² with end, approximately 18 cm long.

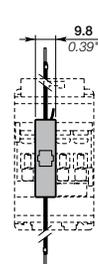

Mounting: Clipped onto the front face of the contactors.

Ordering details

CB5-01

Electronic timers

2

TEF4-ON

Description

TEF4 front-mount electronic timers are used for timing function and are available in ON-delay and OFF-delay versions.

Compact solution in cabinet compared to separate timers

TEF4 electronic timers are front-mounted and clip on AF contactors or NF control relays. A mechanical indicator shows the state of the contactor.

Safe and cost-reduced wiring

TEF4 electronic timers are supplied by a direct plug-in parallel connection to the coil terminals A1 - A2 of the contactor or contactor relay. A varistor is integrated on the timer to offer a built-in protection against surges in the contactor coil.

Available for a wide control voltage range 24...240 V AC/DC

TEF4-ON or TEF4-OFF allow time-delayed functions up to 100 s in 3 distinct time ranges, independently of the control system. The time delay ranges are selected by a switch and the time delay can be adjusted by means of a rotary switch. The timing function is activated by closing or opening the device on which the timer is mounted. The OFF-delay version operates without additional control supply.

TEF4-OFF

Mechanical interlock units

Description

The VM mechanical interlock units are designed for the interlocking of two AF contactors. When mounted between two contactors, the VM mechanical interlock unit prevents one of the contactors from closing as long as the other contactor is closed.

The mechanical interlock units VM4 and VM96-4 include 2 fixing clips.

Mechanical and electrical interlock sets

Description

VEM4 mechanical and electrical interlock set for the interlocking of two AF contactors. VEM4 set includes a mechanical interlock unit VM4 with 2 fixing clips (BB4) and a VE4 electrical interlock block with A2-A2 connection.

Fixing the electrical interlock block to the contactor front face connects the 2 built-in N.C. interlocking contacts with the two coils. VE4 block must be used with A2-A2 connection to respect the electrical connection diagram.

Ordering details

Note: VEM4 not suitable for AF..Z contactors with DC control voltage 12...20 V DC.

Mechanical latching units

2

WB75-A

Terminal marking

Description

For converting standard contactors into latched contactors.

The WB75-A block contains a mechanical latching device with electromagnetic impulse unlatching (AC or DC) or manual unlatching.

Captive screw type connecting terminals, built-in cable clamps, M3.5 (+, -) pozidriv 2 screw with screwdriver guidance; delivered untightened and protected against accidental direct contact.

Operation

After closing, the contactor continues to be held in the closed position by the latching mechanism should the supply voltage fail at the contactor coil terminals.

Contact opening can be controlled:

- electrically by an impulse (AC or DC) on the WB75-A block coil.
(the coil is not designed to be permanently energized)
- manually by pressing the pushbutton on the front face of the WB75-A block.

Mounting

The WB75-A block is clipped onto the front face of the 1-stack contactor where it takes up two slots. The two other slots do not accept CA4 single pole auxiliary contacts. Up to 2 CAL4-11 auxiliary contact blocks can be side-mounted on contactors (except NF22E and AF..-22-00, refer to main accessory fitting details table in main accessories section).

ATK185

ATK750/3

Description

Main terminal protection for AF116 ... AF1250 contactors.

The auxiliary contact blocks and coils are designed to provide an IP 20 degree of protection.

The main terminals, equipped with compression lugs or cable clamps, can be protected against accidental direct contact after wiring (EN 50274) by the addition of terminal shrouds (see table below).

Description

Large contactors (AF190 and above) include bar terminals as standard to easily facilitate the use of busbar as a means of internal wiring. Mechanical lugs are a common solution for allowing the use of stranded or solid wire, and are widely utilized for field wiring termination.

Ordering details

| For contactors (1) | Description | Catalog number | Global reference code | Pkg qty | Weight (1 pce) kg |
|--------------------|--|----------------|-----------------------|---------|-------------------|
| AF190, AF205 | Lug kit, 1-wire, 4 AWG ... 300 MCM | ATK185 | (2) | 3 | 0.164 |
| AF265 ... AF370 | Lug kit, 1-wire, 4 AWG ... 400 MCM | ATK300 | (2) | 3 | 0.166 |
| AF265 ... AF370 | Lug kit, 2-wire, 4 AWG ... 500 MCM | ATK300/2 | (2) | 3 | 0.445 |
| AF400 ... AF580 | Lug kit, 2-wire, 2/0 AWG ... 500 MCM | ATK580/2 | (2) | 3 | 0.345 |
| AF580, AF750 | Lug kit, 3-wire, 2/0 AWG ... 500 MCM | ATK750/3 | (2) | 3 | 1.071 |

| AF1350, AF1650 | Lug kit, 6-wire, 1/0 AWG ... 750 MCM (3) | ATK1650/6 | (2) | 3 | 4.378 |
| AF190, AF205 | Spare terminal hardware | LE185 | 1SFN074716R1000 | 1 set | 0.200 |
| AF265 ... AF370 | Spare terminal hardware | LE300 | 1SFN075116R1000 | 1 set | 0.300 |
| AF400 ... AF580 | Spare terminal hardware | LE460 | 1SFN075716R1000 | 1 set | 0.600 |
| AF580, AF750 | Spare terminal hardware | LE750 | 1SFN076116R1000 | 1 set | 0.750 |

(1) Note: AF1250, AF2050 & AF2650 intended for busbar connection only and terminal hardware is intended to be sourced separately.

(2) North American applications only.

(3) Note: Use of lug kits for AF1350 & AF1650 in general use applications reduces the ratings to 1050A and 1350A respectively. Recommend busbar connection for full ratings.

Terminal enlargements and extensions

2

LW140

Terminal enlargements

Description

Enlargement pieces designed to increase the width of the contactor terminal pads in order to allow larger connections to be mounted.

Ordering details

Terminal connecting strips and shorting bars

LY16-4

LY185

LH38-4

LF16-4

LG16-4

Description

Parallel and series connection of 3-pole contactors:

To obtain a star point (3 parallel-connected poles)

To connect poles in parallel and thus increase the AC load passing through the flow path made up of the parallel-connected poles: LP, LY, LH, LF, LG.

The relevant cable cross-sectional area may limit the maximum permissible current. Consult information in table below

To connect poles in series and thus increase the DC load controlled by the poles: LP, LY (only LY16-4 and LY38-4 selectable strips).

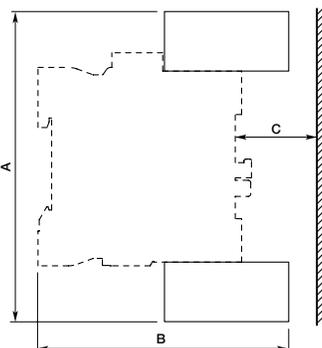

| Types | for connection of "n" poles | with terminal | insulated |
|-------|---|---------------|-----------|
| LP | n = 2 | no | no (1) |
| LY | n = 2 (selectable LY16-4, LY38-4 connecting strips) | no | yes |
| | n = 3 | no | yes (1) |
| LH | n = 2 | yes | no |
| LF | n = 3 | yes | yes |
| LG | n = 4 | yes | yes |

(1) LP460 ... LP750, LY185 ... LY750 not insulated. Use terminal shrouds.

Reversing and phase-to-phase bus kits

2

BER16-4

Connection sets for reversing contactors

Description

The BER and BEM connection sets are used to connect the main poles of two 3-pole contactors mounted side by side.

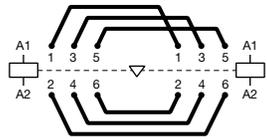

The BER connection sets are made up of 1 upstream and 1 downstream connections.

The BEM connection sets are made up of 3 upstream and 3 downstream connections.

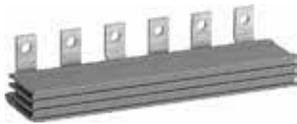

BER and BEM connection sets are insulated and made of solid copper bars.

Phase to phase connections

Wye-delta bus kits

BEY16-4

AF09 ... AF750
1M - 2M -1S

Description

The BEY and BED connection sets are used to connect the main poles of the Line, Delta and Wye contactors of a wye-delta starter.

The connection sets are made up of:

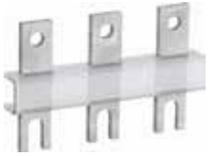

- Line contactor / delta contactor:
 - BEY: upstream phase-to-phase connection
 - BED: upstream connection in parallel
- Delta contactor / Wye contactor: downstream connection in parallel
- Wye contactor: Wye point upstream
- Insulated, solid copper bar.

(1) One set of two coil.
(2) Printed circuit board.

Main contact sets

Description

The contact sets for 3-pole contactors consists of six fixed contacts, three moving contacts, springs and the required screws.

(1) Six fixed, three moving contacts per each power pole.
(2) Moving contacts only.

Arc chutes

Description

The arc chute sets for 3-pole contactors include six arc chutes, two for each power pole.

| Fuse type, 600 V | | J | | | | |
| Maximum electrical switching frequency | | | | | | |
| For general use | | 600 cycles/h | | | | |
| For motor use | | 1200 cycles/h | | | | |

(1) For the corresponding kW/A or hp/A values of 1500 r.p.m, 50 Hz or 1800 r.p.m, 60 Hz, 3-phase motors, see "Motor rated operational powers and currents".

General technical data

| Contactor types | AC / DC operated | AF40 | AF52 | AF65 | AF80 | AF96 |
|---|------------------------------------|--|------|------|------|--------|
| Rated insulation voltage Ui | | 690 V | | | | 1000 V |
| acc. to IEC 60947-4-1 | | 600 V | | | | |
| acc. to UL / CSA | | 600 V | | | | |
| Rated impulse withstand voltage Uimp. | | 6 kV | | | | 8 kV |
| Electromagnetic compatibility | | Devices complying with IEC 60947-1 / EN 60947-1 | | | | |
| Ambient air temperature close to contactor | | | | | | |
| Operation | Fitted with thermal overload relay | (2) | | | | |
| | Without thermal overload relay | -40...+70 °C | | | | |
| Storage | | -60...+80 °C | | | | |
| Climatic withstand | | Category B according to IEC 60947-1 Annex Q | | | | |
| Maximum operating altitude (without derating) | | 3000 m | | | | |
| Mechanical durability | | | | | | |
| Number of operating cycles | | 10 millions operating cycles | | | | |
| Maximum switching frequency | | 3600 cycles/h | | | | |
| Shock withstand | | | | | | |
| acc. to IEC 60068-2-27 and EN 60068-2-27 | | | | | | |
| Mounting position 1 | | | | | | |
| | Shock direction | 1/2 sinusoidal shock for 11 ms: no change in contact position, closed or open position | | | | |

(2) On request.

AF116 ... AF370 3-pole contactors

| Max. add-on N.O. or N.C. auxiliary contacts: see accessory fitting details for 3-pole contactor AF116 ... AF370 | | | | | | | | | |
| Mounting distances | | | | | | | | | |
| The contactors can be assembled side by side | | | | | | | | | |
| Fixing | | | | | | | | | |
| On rail acc. to IEC 60715, EN 60715 | | | | | | | | | |
| By screws (not supplied) | | | | | | | | | |
| | | 4 x M5 | | | | | | | |

AF400 ... AF2650 3-pole contactors

Technical data

Magnet system characteristics

| Contactor types | AC / DC operated | AF400 | AF460 | AF580 | AF750 | AF1250 | AF1350 | AF1650 | AF2050 | AF2650 |
|-------------------------------------|------------------------------|--|-------|------------|-------|------------|---------|--------|--------|--------|
| Coil operating limits | AC supply | At $\theta \leq 70^\circ\text{C}$ $0.85 \times U_c \text{ min} \dots 1.1 \times U_c \text{ max}$ | | | | | | | | |
| acc. to IEC 60947-4-1 | DC supply | At $\theta \leq 70^\circ\text{C}$ $0.80 \times U_c \text{ min} \dots 1.1 \times U_c \text{ max}$ | | | | | | | | |
| Rated control circuit voltage U_c | | | | | | | | | | |
| Coil consumption | | | | | | | | | | |
| AC control voltage 50/60 Hz | | | | | | | | | | |
| 24...60 V AC | Average pull-in value | 900 VA | | 780 VA | | | | | | |
| | Average holding value | 12 VA | | 12 VA | | | | | | |
| 48...130 V AC | Average pull-in value | 1215 VA | | 1100 VA | | | | | | |
| | Average holding value | 12 VA | | 12 VA | | | | | | |
| 100...250 V AC | Average pull-in value | 955 VA | | 880 VA | | | 2450 VA | | | |
| | Average holding value | 12 VA | | 12 VA | | | 48 VA | | | |
| 250 ... 500 V AC | Average pull-in value | 950 VA | | 985 VA | | | | | | |
| | Average holding value | 12 VA | | 12 VA | | | | | | |
| DC control voltage | | | | | | | | | | |
| 20...60 V DC | Average pull-in value | 900 VA | | 785 VA | | | | | | |
| | Average holding value | 5 VA | | 5.5 VA | | | | | | |
| 48...130 V DC | Average pull-in value | 1150 VA | | 1020 VA | | | | | | |
| | Average holding value | 5 VA | | 5 VA | | | | | | |
| 100...250 V DC | Average pull-in value | 895 VA | | 880 VA | | | 2290 VA | | | |
| | Average holding value | 5 VA | | 5 VA | | | 20.5 VA | | | |
| 250 ... 500 V AC | Average pull-in value | 885 VA | | 910 VA | | | | | | |
| | Average holding value | 7.5 VA | | 7.5 VA | | | | | | |
| Drop-out voltage | 55 % of $U_c \text{ min.}$ | | | | | | | | | |
| Voltage sag immunity | Conditions of use on request | | | | | | | | | |
| acc. to SEMI F47 | | | | | | | | | | |
| Dips withstand | $\geq 20 \text{ ms}$ | | | | | | | | | |
| Operating time | | | | | | | | | | |
| Coil supply between A1 - A2 | | | | | | | | | | |
| Between coil energization and: | Main contact closing | 50...120 ms | | | | 50...80 ms | | | | |
| Between coil de-energization and: | Main contact opening | 33...70 ms | | | | 35...55 ms | | | | |
| Control input for PLC's | | | | | | | | | | |
| Between coil energization and: | Main contact closing | 40...60 ms | | 40...90 ms | | 40...65 ms | | | | |
| Between coil de-energization and: | Main contact opening | 10...30 ms | | 10...30 ms | | | | | | |

Remark for 4-pole contactors fitted with 2 N.O. + 2 N.C. main poles

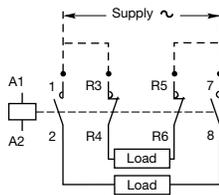

These contactors are suitable for controlling 2 separate circuits, i.e. 2 loads with 2 separate supplies, or 1 circuit comprising 2 separate loads with a single supply (see diagrams below). When the contactor operates there is no mechanical overlapping between the N.O. poles and the N.C. poles: BREAK before MAKE.

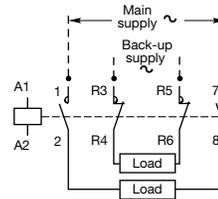

These contactors are not suitable for a reversing starter or for controlling a single load from 2 separate supplies.

Block diagrams

– Single supply and 2 separate loads

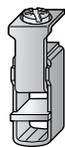

– 2 separate supplies and 2 separate loads

Utilization characteristics according to IEC

2

| | | |
|--|----------------------------|--|
| Rated insulation voltage U_i acc. to IEC 60947-1 | | 690 V |
| Max. electrical impulse time | | |
| On AC coil (with load factor 5 %) | | 20 s |
| On DC coil (with load factor 3 %) | | 8 s |
| Min. electrical impulse time | | |
| For latching (energizing of the contactor coil) | AC | 120 ms |
| | DC | 120 ms |
| For pull-out (energizing of the WB block coil) | AC | 30 ms |
| | DC | 50 ms |
| Coil operating limits | AC or DC supply | 0.85...1.1 x U_c |
| AC control voltage 50/60 Hz | | |
| Rated control circuit voltage U_c | | 24...480 V AC |
| Coil consumption | Average pull-in value | 90 VA |
| | Average holding value | 60 VA |
| DC control voltage | | |
| Rated control circuit voltage U_c | | 24...440 V DC |
| Coil consumption | Average pull-in value | 110 W |
| | Average holding value | 110 W |
| Operating time | | |
| On contactor closing (latching) | | |
| Between coil energization and: | N.O. contact closing | No difference with the operation of a contactor without mechanical latching unit |
| | N.C. contact opening | No difference with the operation of a contactor without mechanical latching unit |
| On contactor opening (unlatching) | | |
| Between WB coil energization and: | N.O. contact opening | 5...25 ms |
| | N.C. contact closing | 7...28 ms |
| Mechanical durability | Number of operating cycles | 1 million operating cycles |
| Max. switching frequency | | 3600 cycles/h with on-load factor of 8 % |

Connecting characteristics

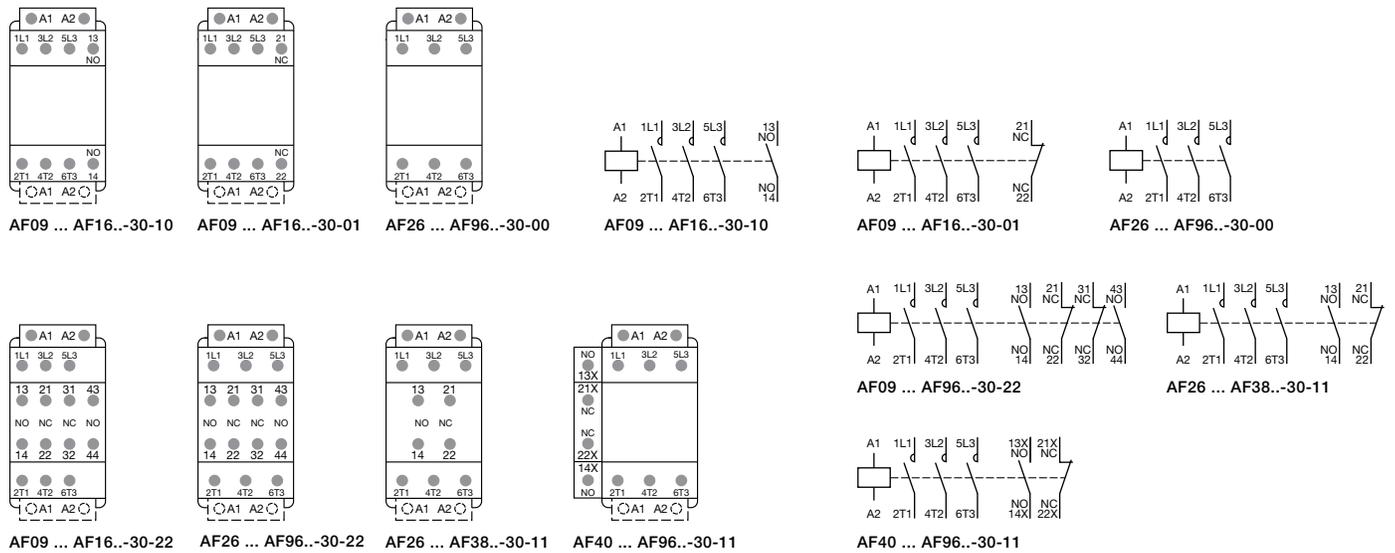

| | | |
|---|-----|--|
| Connection capacity (min. ... max.) | | |
|  Rigid solid | 1 x | 1...4 mm ² |
| | 2 x | 1...4 mm ² |

TF42 thermal overload relays

0.10 ... 38.0 A

For direct coupling to AF09 ... AF38 3-pole contactors

Description

The TF42 thermal overload relays are economic electromechanical protection devices for the main circuit. They offer reliable protection for motors in the event of overload or phase failure. The devices have trip class 10.

The thermal overload relays are three pole relays with bimetal tripping elements. The motor current flows through the bimetal tripping elements and heats them directly and indirectly. In case of an overload (over current), the bimetal elements bent as a result of the heating. This leads to a release of the relay and a change of the contacts switching position (95-96 / 97-98).

- Manual or automatic reset selectable
- Phase loss sensitive acc. to IEC/EN 60947-4-1
- TEST and STOP function – Trip indication on the front
- Temperature compensation
- Suitable for three- and single-phase applications

EF19, EF45 electronic overload relays

0.10 to 45.0 A

For direct coupling to AF09 ... AF38 3-pole contactors

EF19-18.9

EF45-30

DB19EF

KPR-101L

Description

The EF19 and EF45 are self-supplied electronic overload relays, which means no extra external supply is needed. It offers reliable protection for motors in the event of overload or phase failure. Easy to use like a thermal overload relay and compatible with standard motor applications, the electronic overload relay is convincing, above all, due to its wide setting range, high accuracy, high operational temperature range and the possibility to select a trip class (10E, 20E, 30E). Further features are the temperature compensation, trip contact (N.C.), signal contact (N.O.), automatic or manual reset selectable, trip-free mechanism, STOP and TEST function and a trip indication. The overload relays are connected directly to the contactors.

EF65, EF96, EF146 electronic overload relays

25 to 150 A

For direct coupling to AF40 ... AF146 3-pole contactors

3

EF65-70

EF96-100

EF146-150

KPR-101L

Description

The EF65, EF96 and EF146 are self-supplied electronic overload relays, which means no extra external supply is needed. It offers reliable protection for motors in the event of overload or phase failure. Easy to use like a thermal overload relay and compatible with standard motor applications, the electronic overload relay is convincing, above all, due to its wide setting range, high accuracy, high operational temperature range and the possibility to select a trip class (10E, 20E, 30E). Further features are the temperature compensation, trip contact (N.C.), signal contact (N.O.), automatic or manual reset selectable, trip-free mechanism, STOP and TEST function and a trip indication. The overload relays are connected directly to the contactors.

Auxiliary circuit according to IEC/EN

| | | |
|--|-------------------|--------|
| Type | EF19 | EF45 |
| Rated operational voltage U_n | 600 V AC / DC | |
| Conventional free air thermal current I_n | 6 A | |
| Rated frequency | DC, 50/60 Hz | |
| Number of poles | 1 N.C. + 1 N.O. | |
| I_n / Rated operational current AC-15 acc. to IEC/EN 60947-5-1 for utilization category | | |
| 110-120 V | 50/60 Hz | 3.00 A |
| 220-230-240 V | 50/60 Hz | 3.00 A |
| 440 V | 50/60 Hz | 1.10 A |
| 480-500 V | 50/60 Hz | 0.75 A |
| I_n / Rated operational current DC-13 acc. to IEC/EN 60947-5-1 for utilization category | | |
| 24 V | | 1.50 A |
| 60 V | | 0.55 A |
| 110-120-125 V | | 0.55 A |
| 250 V | | 0.27 A |
| Minimum switching capacity | 12 V / 3 mA | |
| Short-circuit protective device | 6 A, Fuse type gG | |
| Rated impulse withstand voltage U_{imp} | 6 kV | |
| Rated insulation voltage U_i | 690 V | |

Coordination with short-circuit protection devices

In compliance with standards IEC 60947-4-1 and EN 60947-4-1, we define for the contactors and starters the type, rating and characteristics of the short-circuit protection devices SCPD which allow selective protection against overloads and ensure protection against short circuits.

Basic functions

Any starter is designed to:

- start motors,
- ensure continuous functioning of motors,
- disconnect motors from the supply line,
- guarantee protection of motors against overloads.

The starter is typically made up of a switching device (contactor) and an overload protection device (thermal overload relay or electronic overload relay).

4

These two devices MUST be coordinated with equipment capable of providing protection against short circuit (SCPD: short circuit protective device): typically a circuit breaker with magnetic release only or a switch fuse. These are not necessarily part of the starter.

Applicable standards

IEC 60947-4-1 (EN 60947-4-1) precisely defines the different points to be considered in order to carry out correct coordination.

Complete coordination for a combination includes the following points:

- Selectivity test between the overload relay and the short-circuit protection device SCPD.
- Short-circuit condition tests:
 - at prospective "r" currents - These currents depend on the rated operational current of the starter (**I_e AC-3**) and are given by the standard (Table 13). For example:
 - r = 1kA for **I_e AC-3** < 16 A
 - r = 3 kA for 16 A < **I_e AC-3** < 63 A
 - r = 5 kA for 63 A < **I_e AC-3** < 125 A etc.
 - at the rated conditional short-circuit current "**I_q**" - This is the maximum prospective current that the combination can withstand, for example 50 kA.

Types of coordination

IEC 60947-4-1 (EN 60947-4-1) defines two types of coordination according to the expected level of service continuity. Acceptable extreme damage for the switchgear is divided into two types.

Type 1: In short-circuit conditions, the contactor or starter does not endanger persons or installations and will not be able to then operate without being repaired or having parts replaced.

Type 2: In short-circuit conditions, the contactor or starter does not endanger persons or installations and will be able to operate afterwards. The risk of contacts light welding is acceptable. In this case, the manufacturer must stipulate the measures to be taken with respect to maintenance of the equipment.

The complete ABB offer

ABB has acquired years of experience with respect to problems of coordination and is able to make a complete offer based on tests performed in its qualified laboratories. This offer includes 400 V, 500 V, 690 V networks.

A complete data base of coordination tables, according to IEC 60947-4-1 (EN 60947-4-1), is available on the ABB Website.

In the coordination tables the following short-circuit protection devices are recommended:

- Moulded case circuit-breakers (MCCBs)
- Miniature circuit-breakers (MCBs)
- Switch-disconnector-fuses (aM, gG and BS)
- Manual Motor Starters (MMS).

General remarks applicable to all tables

- Each table is defined for a maximum ambient temperature of 40 °C. For higher temperatures, apply a derating factor according to the following rules:
 - Fuses: factor of 0.8 applied to **I_n** for an ambient temperature of 70 °C
 - MCCBs and MCBs: factor of 0.8 applied to **I_n** for an ambient temperature of 60 °C
 - The starter derating factor depends on the operating conditions of thermal overload relays:
 - Factor of 0.9 applied to **I_n** for an ambient temperature of 70 °C.
- Each table is defined for motor currents: 3-phase motors, 4-pole
- **Normal starting** means a starting time < 2 s. - **Difficult starting** means an accelerating time 10 s < **t_s** < 30 s
- **Tripping classes** of thermal overload relays according to IEC 60947-4-1 (EN 60947-4-1): 10A and 10
- **Tripping classes** of electronic overload relays according to IEC 60947-4-1 (EN 60947-4-1): 10E, 20E, 30E selectable
- In the tables with MCCBs, these are fitted with the magnetic relay alone. Setting is always carried out at > 12.3 **I_e AC-3** so that the transient current peak occurring during starting does not lead to tripping.

Coordination with short-circuit protection devices

A complete data base of coordination tables, according to [IEC 60947-4-1](#) (EN 60947-4-1) or [UL 508 / UL 60947-4-1](#), is available on the ABB Website: see below.

Selection

Simple or multiple selections all from the same screen.

Short-circuit protection devices

- Air circuit breakers
- Fuses "gG" or "aM"
- Miniature circuit breaker
- Moulded case circuit breaker
- Manual motor starter

Starter type

- Direct-on-line normal start
- Direct-on-line heavy duty
- Star-delta normal start
- Soft starter normal start

Coordination

- IEC type 1 or type 2
- UL type A to Type F

Results

- Search results displayed at the bottom of the selection page.
- Only the most appropriate solutions to your application, will be displayed at the bottom of the page.
- "Enable Smart Current Search" function featured for the short-circuit current where "near to" selected values also are included in the result.
- Possible to print the page to a pdf file or from your printer.
- "Clear selection" function to deselect all selected.

Access

To find the coordination tables for motor protection, please see:

www.abb.com/lowvoltage then go to the right menu: "Support", select: "Online Product Selection Tools" then select "Coordination Tables for motor protection"

Standards, specifications and certifying organizations

Definitions

ABB low voltage devices are developed and manufactured in accordance with the applicable regulations as stated in the international IEC standards, the European EN standards and the national ones such as NF, DIN, GB and BS. For devices installed in ships, an approval issued by independent classification societies is demanded by the maritime insurance companies.

CB scheme

Certification Body certificates (CB certificates) are available to prove the complete conformity to standards

The IEC CB (Certification Body) scheme is multilateral agreement between the National Certification Bodies to allow international certification of electrical and electronic products so that a single certification allows worldwide market access.

The CB Scheme was established by the International Electrotechnical Committee for conformity testing to standards for electrical equipment (IECEE).

Certified products

In some cases, products are validated and tested according to a standard by a certification body and the manufacturer is regularly visited by this body in order to check the respect of the design and the materials used. This process creates a certified product. This is the case of UL (Underwriters Laboratories) and CSA (Canadian Standard Association) for instance (see below).

Specifications

International Specifications

The International Electrotechnical Commission, IEC, which is part of the International Standards Organization, ISO, publishes IEC publications which act as a basis for the world market.

European Specifications and National Specifications

The European committee for electrotechnical standardization (CENELEC), which groups together European countries, publishes EN standards.

These European standards may differ very little from IEC international standards and have similar numbering.

The same applies for national standards which use, without exception, the same numbering and reproduce the texts of these unified standards in their entirety. Contradicting national standards are withdrawn.

European Directives

The guarantee of the free movement of goods within the European Community means that any regulatory differences between member states have been eliminated. The European directives set up common rules that are included in the legislation of each state while contradictory regulations are cancelled.

Three directives are essential:

- **Low Voltage Directive** 2006/95/EC concerns electrical equipment from 0 to 1000 V AC and from 0 to 1500 V DC.

This specifies that compliance with the requirements that it sets out is acquired if the equipment conforms to the standards harmonized on an European level. EN 60947-1 and EN 60947-4-1 for contactors.

- **Machinery Directive** 2006/42/EC for safety specifications of machines and equipment on complete machines.
- **Electromagnetic Compatibility Directive** 2004/108/EC which concerns all devices able to create electromagnetic disturbance.

CE Marking:

CE marking indicates that the marked equipment conforms to the relevant EU directive.

CE marking is part of an administrative procedure and guarantees free movement of the product within the European Community.

Standards in Canada and the USA

Canadian and American specifications are more or less equivalent but differ greatly from IEC standards.

UL Underwriters Laboratories USA

CSA Canadian Standard Association Canada

UL (USA) specifications make the following distinction between devices:

Listed Product

A product that has been produced under UL's listing and follow-up service program in accordance with the terms of UL's service agreement and that bears the UL listing mark as the manufacturer's declaration that the product complies with UL's requirements.

Recognized Component

A part or subassembly covered under UL's recognition service and intended for factory installation in listed (or other) products. Recognized components are incomplete in certain construction features or restricted in performance capabilities and not intended for separate installation in the field, rather they are intended for use as components of incomplete equipment submitted for investigation by UL. Final acceptance of the component in the complete equipment is dependent upon its installation and use in accordance with all applicable use conditions and ratings noted in the component report issued by UL, in the guide information and in the individual client's Recognized Component information page.

The combined UL signs for the USA and Canada are recognized by the authorities of both countries.

Compulsory China Certification (CCC): The CCC mark is a compulsory certification mark in the field of safety for products sold on the Chinese market.

GOST: Russia (please consult your local ABB sales office)

C-Tick: The C-Tick mark certifies compliance with the Australian EMC requirements. The mark is also recognized in New Zealand

ANCE: Mexico

Marine Approvals

The following specifications must be respected when these devices are used on ships:

| | |
|-------------|--|
| BV | Bureau Veritas France |
| DNV | Det Norske Veritas Norway |
| GL | Germanischer Lloyd Germany |
| LRS | Lloyd's Register of Shipping Great Britain |

National Standards

European countries national standards reproduce the corresponding EN... standards. Codification is built by addition of a prefix to EN numbering.

For instance:

- France **NF** EN...
- Germany **DIN** EN...
- Great Britain **BS** EN...
- Italy **CEI** EN...
- Sweden **SS** EN...

Terms and technical definitions

Circuits

- auxiliary circuit: All the conductive parts of a contactor designed to be inserted in a different circuit from the main circuit and the contactor control circuits.
- control circuit: All the conductive parts of a contactor (other than the main circuit and the auxiliary circuit) used to control the contactor's closing operation or opening operation or both.
- main circuit: All the conductive parts of a contactor designed to be inserted in the circuit that it controls.

Thermal overload relay tripping classes

IEC 60947-4-1 defines tripping classes 10 A, 10, 20 and 30. Types 10 A, 10, etc. correspond to the maximum tripping time for a making current at 7.2 times the setting current.

4

Furthermore, for each class the standard specifies the tripping time for 1.5 times the setting current and sets the non tripping condition at 1.05 times the setting current.

All these data are summarized in the table below.

Extract from IEC 60947-4-1:

| Tripping class | 10 A | 10 | 20 | 30 |
|---|-------------|--------|--------|--------|
| Max. tripping time for 1.5 times the setting current (warm state) | s 120 | 240 | 480 | 720 |
| Tripping time for 7.2 times the setting current (cold state) | s 2 - 10 | 4 - 10 | 6 - 20 | 9 - 30 |
| For 1.05 times the setting current | No tripping | | | |

Electromagnetic compatibility

AF... contactors comply with IEC 60947-1, 60947-4-1 and EN 60947-1, 60947-4-1 standards.

Definitions:

Environment A: "Mainly relates to low-voltage non public or industrial networks/locations/installations (EN 50082-2 article 4) including highly disturbing sources".

Environment B: "Mainly relates to low-voltage public networks (EN 50082-1 article 5) such as residential, commercial and light industrial locations/installations. Highly disturbing sources such as arc welders are not covered by this environment".

Notice for AF09 ... AF38, AF116 ... AF2650 contactors and NF contactor relays: these products have been designed for environment A. Use of this product in environment B may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures.

AF40 ... AF96 have been designed for environment B.

Definitions according to SEMI F47-0706

SEMI F47-0706 defines the voltage sag immunity required for semiconductor processing, metrology and automated test equipment, and on subsystems and components which are used in the construction of semiconductor processing equipment including but not limited to:

- Power supplies
- Generators
- Robots and factory interface
- Chillers, pumps, blowers
- AC operated contactors and contactor relays
- ...

voltage sag: an rms reduction in the AC voltage, at the power frequency, for durations from a half cycle to a few seconds.

The IEC terminology for this phenomenon is voltage dip.

voltage sag immunity: the ability of equipment to withstand momentary electrical power interruptions or sags

Coordination of protections against short circuit

The goal here is to protect electromechanical starters and softstarters.

Any starter is designed to:

- start motors,
- ensure continuous functioning of motors,
- disconnect motors from the supply line,
- guarantee protection of motors against overloads.

The starter is typically made up of a switching device (contactor) and an overload protection device (thermal overload relay or electronic overload relay). These two devices **MUST** be coordinated with equipment capable of providing protection against short circuit (SCPD: short circuit protective device): typically a circuit breaker with magnetic release only or a switch fuse. These are not necessarily part of the starter.

The characteristics of the starter must comply with the international standard IEC 60947-4-1 which defines the above items as follows:

contactor: a mechanical switching device having only one position of rest, operated otherwise than by hand, capable of making, carrying and breaking currents under normal circuit conditions including overload conditions.

overload release: overload relay or release which operates in the case of overload and also in case of loss of phase.

circuit-breaker: defined by IEC 60947-2 as a mechanical switching device, capable of making, carrying and breaking currents under normal circuit conditions and also making, carrying for a specified time and breaking currents under specified abnormal circuit conditions.

IEC publication 60947-4-1 defines coordination types "1" and "2":

- Type "1" coordination requires that, in the event of a short-circuit, the contactor or starter does not endanger persons or installations and will not then be able to operate without being repaired or parts being replaced.
- Type "2" coordination requires that, in short-circuit conditions, the contactor or starter does not endanger persons or installations and will be able to operate afterwards. The risk of contacts being light welded is acceptable. In this case, the manufacturer must stipulate the measures to be taken with respect to maintenance of the equipment.

Rated operational current I_e

Current rated by the manufacturer. It is mainly based on the rated operational voltage U_e, the rated frequency, the utilization category, the rated duty and the type of protective enclosure, if necessary.

Conventional free air thermal current I_{th}

Current that the contactor can withstand in free air for a duty time of 8 hours without the temperature rise of its various parts exceeding the maximum values given by the standard.

Operating cycle or cycle

Includes one making operation and one breaking operation.

Cycle time

This is the sum of the current flow time and the no-current time for given cycle.

Electrical durability

Number of on-load operating cycles that the contactor is able to carry out. It depends on the operational current, the operational voltage and the utilization category.

Terms and technical definitions

Mechanical durability

Number of no-current operating cycles that a contactor is able to carry out.

Assessed failure rate

Defined according to IEC 60947-5-4. This rate is given in standard industrial environments for the contactor relays and for the built-in auxiliary contact of contactors.

Load factor

Ratio of the on-load operating time to the total cycle time x 100.

Switching frequency

Number of switching cycles per hour.

Plugging

Stopping or fast reversal in rotation direction of a motor by two supply leads being interchanged while the motor is running.

Inching

Energization of a motor's circuit repeatedly or for short periods with the aim of obtaining small movements of the driven mechanism.

Coil operating limits

Expressed in multiples of the nominal control circuit voltage U_c for the upper and lower limits.

Mounting position

Comply with the manufacturer's instructions. Restrictions are to be taken into account for certain mounting positions.

Rated breaking or making capacity

Root mean square (r.m.s.) value of the current that the contactor is able to break or make at a given voltage according to the conditions specified by standards and for a given utilization category.

Intermittent duty

Duty during which the contactor is successively closed or open for periods which are too short to enable the contactor to achieve thermal balance.

Ambient temperature

Air temperature close to the contactor.

Time

- Time constant: Ratio of the inductance to the resistance ($L/R = \text{mH}/\Omega = \text{ms}$).
- Short-time withstand current: Current that the contactor is able to withstand in closed position for a short time interval and in specified conditions.
- Closing time: Time interval between the coil energization and the instant the contacts touch on all the poles.
- Opening time: Time interval between the coil de-energization and the instant the contacts separate on all the poles.

Rated control voltage U_c

Control voltage value for which the control circuit is sized.

Rated operational voltage U_e

Voltage to which the contactor's utilization characteristics refer. In three-phase it is the phase-to-phase voltage.

Rated insulation voltage U_i

Reference voltage for dielectric tests and creepage distances.

Rated impulse withstand voltage U_{imp}

Peak value of an impulse voltage, having a specified form and polarity, which does not cause breakdown in specific test conditions.

Shock withstand

Requirement for vehicles, crane drives, installations on board ships and plug-in equipment. For the acceptable "g" values, the contacts must not change position and the thermal overload relays must not trip.

Resistance to vibrations

Requirements for vehicles, boats and other means of transport. For the specified vibration amplitude and frequency values the device must remain able to operate.

Standards and utilization categories

Utilization categories:

A contactor's duty is characterized by the utilization category together with the rated operational voltage and current indicated.

Utilization categories for contactors according to IEC 60947-4-1:

| | | |
|----------------------|-------|--|
| Alternating current: | AC-1 | Non-inductive or slightly inductive loads, resistance furnaces. |
| | AC-2 | Slip-ring motors: starting, switching off. |
| | AC-3 | Cage motors: starting, switching off running motors. |
| | AC-4 | Cage motors: starting, plugging, inching. |
| | AC-5a | Discharge lamp switching. |
| | AC-5b | Incandescent lamp switching. |
| | AC-6a | Transformer switching. |
| | AC-6b | Capacitor bank switching. |
| Direct current: | AC-8a | Hermetic refrigeration compressor motor control with manual resetting of overload releases. |
| | AC-8b | Hermetic refrigeration compressor motor control with automatic resetting of overload releases. |
| | DC-1 | Non inductive or slightly inductive loads, resistance furnaces. |
| | DC-3 | Shunt motors: starting, plugging, inching, dynamic breaking of DC motors. |
| | DC-5 | Series motors: starting, plugging, inching, dynamic breaking of DC motors. |
| | DC-6 | Incandescent lamp switching. |

Utilization categories for contactor relays according to IEC 60947-5-1:

| | | |
|----------------------|-------|--|
| Alternating current: | AC-12 | Control of resistive loads and static loads with opto-coupler isolation. |
| | AC-13 | Control of static loads with transformer isolation. |
| | AC-14 | Control of weak electromagnetic loads (≤ 72 VA). |
| | AC-15 | Control of electromagnetic loads (> 72 VA). |
| Direct current: | DC-12 | Control of resistive loads and static loads with opto-coupler isolation. |
| | DC-13 | Control of DC electromagnets. |
| | DC-14 | Control of DC electromagnets having economy resistors. |

In fact some applications, and the specific criteria characterizing the various loads controlled by contactors, may modify the utilization characteristics of the contactors. The main applications concerned are:

Capacitor bank switching

Account must be taken of high peaks when the current is made and of harmonic currents during continuous duty. For this application, IEC publication 60947-4-1 stipulates utilization category AC-6b. The operational currents or powers acceptable for the contactors are determined by our electrical tests; IEC publication 60947-4-1 gives the calculating formula for determining the operational current (Table 9).

Transformer switching

Account must be taken of the peaks due to magnetization phenomena when the current is made.

For this application, IEC publication 60947-4-1 stipulates utilization category AC-6a. The operational currents or powers acceptable for the contactors are determined using the values obtained for AC-3 or AC-4 category tests and the calculating formula given in IEC 60947-4-1 (Table 9).

Lighting circuit switching

The current peaks occurring on energization of the circuit and the power factor depend on the type of lamps, the connection mode and whether or not there is compensation.

For this application, IEC publication 60947-4-1 stipulates two standard utilization categories:

- AC-5a for discharge lamp switching.
- AC-5b for incandescent lamp switching.

Slip-ring motor switching

The contactors used for short-circuiting rotor resistors can be used for rotor voltages up to 2 times the rated operational voltage.

The conditions of use of rotor contactors depend on the connection mode of the main poles. IEC 60947-4-1 stipulates AC-2 utilization category for startor contactor.

Standards and utilization categories

Utilization categories (cont.)

DC power circuit switching

Arc suppression is more difficult in direct current than in alternating current. Higher the time constant and voltage, heavier the breaking conditions: consequently several poles have to be connected in series.

AC high current circuit switching

Possibility of increasing performances by connecting poles in parallel.

Circuit switching during temporary and intermittent duty

In these cases higher operational currents are acceptable.

Influence of the length of the conductors used in the contactor control circuit

According to the operational voltages, the cross-sectional areas, the coil consumption and the control layout, difficulties due to line resistances and capacitances may appear during contactor closing and opening orders.

Making and breaking conditions for utilization categories

| Utilization category | Durability test conditions | | | | | | Occasional operation Making and breaking capacities - 50 operating cycles | | | | | |
|----------------------|----------------------------|------|---------------------------------|---------------------|------|---------------------------------|--|-------|---------------------------------|---------------------|-------|---------------------------------|
| | Making conditions | | | Breaking conditions | | | Making conditions | | | Breaking conditions | | |
| | I/le | U/Ur | Cos. θ or L/R (ms) | I/le | U/Ur | Cos. θ or L/R (ms) | Ic/le | Ur/Ur | Cos. θ or L/R (ms) | Ic/le | Ur/Ur | Cos. θ or L/R (ms) |

Contactors for AC circuit switching

| | | | | | | | | | | | | | |

Contactors for DC circuit switching

| | | | | | | | | | | | | | |
|------|--|-----|---|-----|-----|---|-----|-----|------|-----|-----|------|-----|
| DC-1 | | 1 | 1 | 1 | 1 | 1 | 1 | 1.5 | 1.05 | 1 | 1.5 | 1.05 | 1 |
| DC-3 | | 2.5 | 1 | 2 | 2.5 | 1 | 2 | 4 | 1.05 | 2.5 | 4 | 1.05 | 2.5 |
| DC-5 | | 2.5 | 1 | 7.5 | 2.5 | 1 | 7.5 | 4 | 1.05 | 15 | 4 | 1.05 | 15 |

Contactors for AC circuit switching

| | | | | | | | | | | | | | |
|-------|-----------------|----|---|-----|---|---|-----|----|-----|-----|----|-----|-----|
| AC-14 | (≤ 72 VA) | - | - | - | - | - | - | 6 | 1.1 | 0.7 | 6 | 1.1 | 0.7 |
| AC-15 | (> 72 VA) | 10 | 1 | 0.7 | 1 | 1 | 0.4 | 10 | 1.1 | 0.3 | 10 | 1.1 | 0.3 |

Contactors for AC circuit switching

| Utilization category | Standard operation | | | | | | Occasional operation Making and breaking capacities - 50 operating cycles | | | | | |
|----------------------|--------------------|------|------------|---------------------|------|------------|--|-------|------------|---------------------|-------|------------|
| | Making conditions | | | Breaking conditions | | | Making conditions | | | Breaking conditions | | |
| | I/le | U/Ur | $T_{0.95}$ | I/le | U/Ur | $T_{0.95}$ | Ic/le | Ur/Ur | $T_{0.95}$ | Ic/le | Ur/Ur | $T_{0.95}$ |
| DC-13 | 1 | 1 | 6 P(1) | 1 | 1 | 6 P(1) | 1.1 | 1.1 | 6 P(1) | 1.1 | 1.1 | 6 P(1) |
| DC-14 | - | - | - | - | - | - | 10 | 1.1 | 15 ms | 10 | 1.1 | 15 ms |

(1) The value "6 x P" is the result of an empirical relation which is estimated to represent most DC magnetic loads up to the highest limit of P = 50 W (6 x P = 300 ms). It is accepted that loads having drawn energy above 50 W are made up of weaker loads in parallel. As a consequence, the 300 ms value must form the highest limit whatever the value of the power drawn.

Key:

U (I) = applied voltage (current)

Ur = recovery voltage

L/R = test circuit time constant

Ue (Ie) = rated operational voltage (current)

Ic = making and breaking current expressed in DC or in AC like the r.m.s. value of the symmetrical components

$T_{0.95}$ = time required to reach 95% of the current in steady-state conditions, expressed in milliseconds

Degrees of protection

General

In an installation, the degree of protection required for electrical equipment depends on the environmental characteristics. The degree of protection, ensured by the enclosure of equipment or by the cubicle containing the equipment is expressed by the IP code which gives the level of protection against access to hazardous parts, the ingress of foreign bodies and/or the ingress of water, in compliance with IEC 60529, IEC 60947-1. Besides the IP symbol, the complete code has two figures followed (optionally) by two additional letters. A short description of the elements used in IP coding is given below.

| IP... code | Figures or letters | Specifications for installation protection | Protection of persons |
|---|--------------------|--|--|
| First figure | | Against ingress of foreign bodies | Against access to hazardous parts with: |
| | 0 | No protection | No protection |
| | 1 | Diameter > 50 mm | Back of hand |
| | 2 | Diameter > 12.5 mm | Finger |
| | 3 | Diameter > 2.5 mm | Tool |
| | 4 | Diameter > 1 mm | Wire |
| | 5 | Limited protection against dust | Wire |
| | 6 | Total protection against dust | Wire |
| Second figure | | Against entrance of water having a harmful effect | |
| | 0 | No protection | |
| | 1 | Vertical dripping | |
| | 2 | Dripping at a vertical angle of < 15° | |
| | 3 | Rain at a vertical angle of < 60° | |
| | 4 | Splashing | |
| | 5 | Low pressure water jet | |
| | 6 | Powerful water jets | |
| | 7 | Temporary immersion | |
| | 8 | Permanent immersion | |
| Additional letter (optional) for use with: | | Against ingress of foreign bodies | Against access to hazardous parts with: |
| First figure 0 | A | Stopped by a barrier with a 50 mm Ø sphere | Back of hand |
| First figure 0 or 1 | B | Entrance of test finger limited to 80 mm | Finger |
| First figure 1 or 2 | C | Wire with 2.5 mm Ø and length of 100 mm | Tool |
| First figure 2 or 3 | D | Wire with 1 mm Ø and length of 100 mm | Wire |
| Additional letter (optional) | | Specific additional information | |
| | H | High voltage apparatus | – |
| | M | Moving parts which are moving during water test | |
| | S | Moving parts which are stationary during water test | |
| | W | Specified atmospheric conditions | |

Note: The type of enclosure or cubicle in which the equipment must be installed prevails with respect to the degree of protection.

Climatic withstand of devices

The life time of devices are mainly influenced by series of climatic factors which cause their corrosion.

In practice, besides climatic conditions, there are other factors which may damage equipment such as fungi, insects (termites), dust, work site dirt and aggressive environment (salty or sulphurous atmosphere, etc.) which can often only be identified at the place of installation.

Climatic stress, definitions and test conditions are dealt with in national publications such as the DIN 50 series and UTE 63-100 publication which are attached to international publications such as IEC 60068.

The test conditions are:

| Description | Symbolization | Time of one cycle | Cycle phase time | Temperature in test chamber | Relative humidity |
|-----------------------------------|---------------------------|-------------------|--|-----------------------------|-------------------|
| Humidity and variable temperature | IEC 60068-2-30 Test Db | 24 hours | 12 hours including rise in temperature | 40 °C | 95 % |
| | | | 12 hours including cooling (open device) | 25 °C | 95 % |

4

ABB contactors have been used for many years in the most countries, with hot and humid climates for example: Brazil, Indonesia, India or on ships. Experience has shown that ABB devices can be used in most countries throughout the world.

The climate of the country in which the apparatus is installed is not the determining choice factor.

Account must be taken of:

- the immediate environment of the devices (sheltered, ventilated, temperature),
- the aggressivity of the immediate atmosphere at the place of installation,
- the length and frequency of non operating periods.

In the case of frequent condensation (i.e. the formation of condensation caused by rapid changes in temperature), heating resistors must be installed in cubicles (100 to 250 W per m³ of enclosure).

The table below gives the cases where heating is necessary.

| Environment | | Operating conditions | Climate | Internal heating of enclosure |
|---------------------------|-------------------------------------|----------------------|------------------------|-------------------------------|
| Inside premises | No running water no condensation | Continuous or not | All climates | Without |
| | With running water | Continuous | All climates | Without |
| Frequent or long stops | | Temperate | Without | |
| Outside, sheltered | No running water no condensation | Continuous or not | Tropical | With |
| | | | Temperate | Without |
| Outside or by the seaside | With running water | Continuous | All climates | Without |
| | | | Frequent or long stops | Temperate |
| | | | Tropical | With |

The entrance of dust, insects, dirt, etc. in devices may be prevented if the appropriate degree of protection according to IEC 60529 is chosen (See "Degree of protection" table).

North American HVAC applications

General

AF Range contactors can be used for North American HVAC applications, controlling loads such as resistive heaters and refrigerant compressor motors. The cycling endurance required for controllers in these applications is typically higher than those for squirrel cage motors.

This testing has been performed in accordance with UL 60947-4-1A and CSA C22.2 No. 60947-4-1A, 1st edition.

CSA elevator applications

General

AF Range contactors can be used for CSA elevator applications, controlling motors utilized in equipment designed to transport personnel. These devices have been tested under load to 500,000 electrical cycles at twice their rated nominal current.

This testing has been performed in accordance with CSA B44.1 / ASME 19.2.2

North American lighting applications

General

AF Range contactors can be used for North American lighting applications, controlling the two basic types of lighting loads: Tungsten, or incandescent, and ballast, or fluorescent. These devices are rated for controlling single phase (one load per pole up to 347 V AC) and three phase loads up to 600 V AC.

This testing has been performed in accordance with UL 60947-4-1A and CSA C22.2 No. 60947-4-1A, 1st edition.

(1) Ratings representative of all auxiliary configurations and coil voltages, including low-consumption versions.

Pilot duty and overload trip classes

Pilot duty

Pilot duty is a rating assigned to a relay or switch that controls the coil of another relay or switch. This rating is applied to auxiliary devices utilized in the control circuit. Devices are typically marked with contact rating designations, first an AC value, and second a DC value (ie. A600, Q600). Charts like the ones below can be used to determine the maximum current and voltage that the device is suitable for.

Pilot duty ratings for AC control circuits acc. UL 508, Table 139.1

| Contact rating designation | Continuous thermal current | Maximum current | | | | | | | | Volt-amperes | |

Overload trip classes

In addition to their current setting, overloads are also marked with a trip class. This class indicates the period of time that an overload will delay before normal tripping characteristics take effect. This delay is an important consideration based on the starting time of the motor.

Overload trip classes acc. UL 60947-4-1A

| Trip class | Tripping Time Tp (Seconds) |
|------------|----------------------------|
| 10A | 2 < Tp ≤ 10 |
| 10 | 4 < Tp ≤ 10 |
| 20 | 6 < Tp ≤ 20 |
| 30 | 9 < Tp ≤ 30 |

AF09 ... AF96 contactors

DC circuit switching

General

The arc switching on DC is more difficult than on AC.

For selecting a contactor it is essential to determine the current, the voltage and the L/R time constant of the controlled load

For information, typical time constant values are quoted hereafter: non inductive loads such as resistance furnaces (L/R ≈ 1 ms), inductive loads such as shunt motors (L/R ≈ 2 ms) or series motors (L/R ≈ 7.5 ms)

The addition of a resistor in parallel with an inductive winding helps in the elimination of the arcs

All the poles required for breaking must be connected in series between the load and the source polarity not linked to earth (or chassis).

Technical data

The tables indicate for the standard contactors the I_e max. operating currents depending on: the utilization category (i.e. L/R) DC-1, DC-3, DC-5 as defined in the IEC 60947-4-1 publication, the operating voltage U_e and the pole coupling details.

Ampere values quoted in these tables are valid for a -25...+70 °C temperature close to the contactors, as long as these values do not exceed the AC-1 Ampere values for the corresponding ambient temperature

4

Max. switching frequency: 300 cycles/h.

Selection table
